Etiquetas	Arquitectura de Datos DBA

Translates data quality findings into financial exposure. Each governance failure identified is quantified in USD - credit risk from duplicate clients, revenue leakage from uninvoiced deliveries, SAT audit exposure from orphan invoices, legal liability from untraceable incidents, and overbilling from duplicate invoices. Output is a consolidated impact table ranked by financial exposure, ready for executive presentation.

```

-- =====
--
-- P02 | Data Governance Architecture
-- File: 05_business_impact.sql
-- Author: cblancogt
--
-- Translates governance failures into financial and legal exposure.
-- All monetary values from real schema columns:
-- facturacion.FACTURA.total - invoice amount
-- operaciones.PEDIDO.valor_declarado - declared cargo value
-- operaciones.INCIDENTE.costo_estimado - estimated incident cost
-- ventas.CONTRATO_CLIENTE.tarifa_base - contracted rate
--
-- Exchange rate GTQ to USD configurable. All figures output in both currencies.
-- =====
